

How to Upload .zip Files without MacOSX & DS_Store files

Set up a shell script

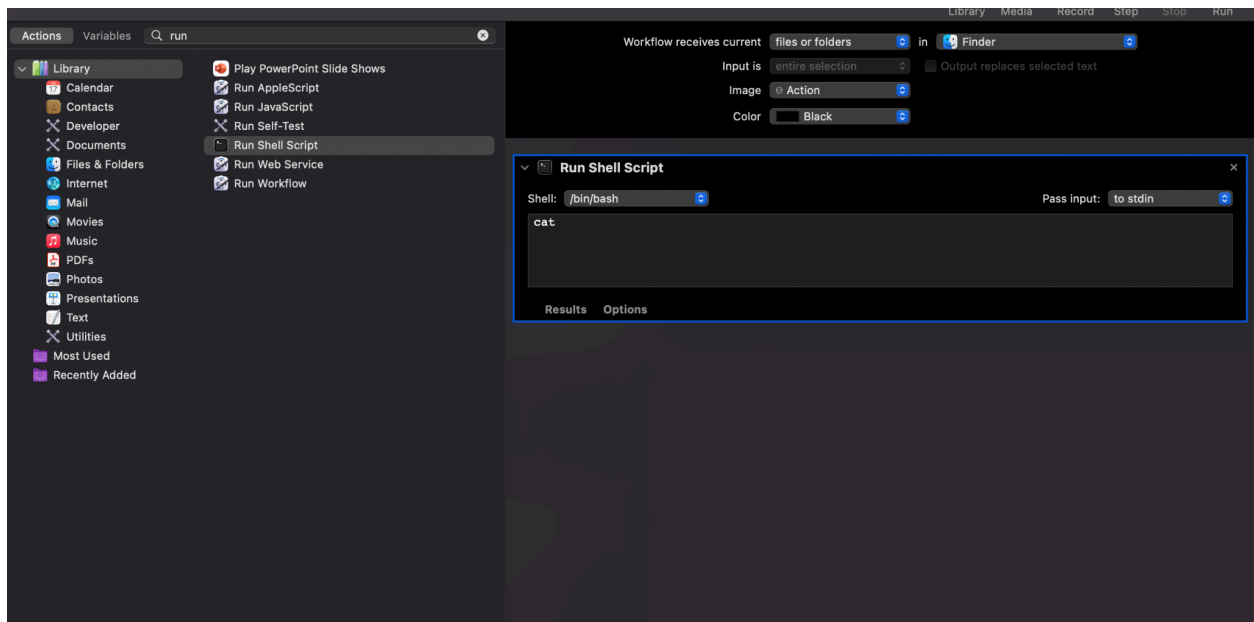

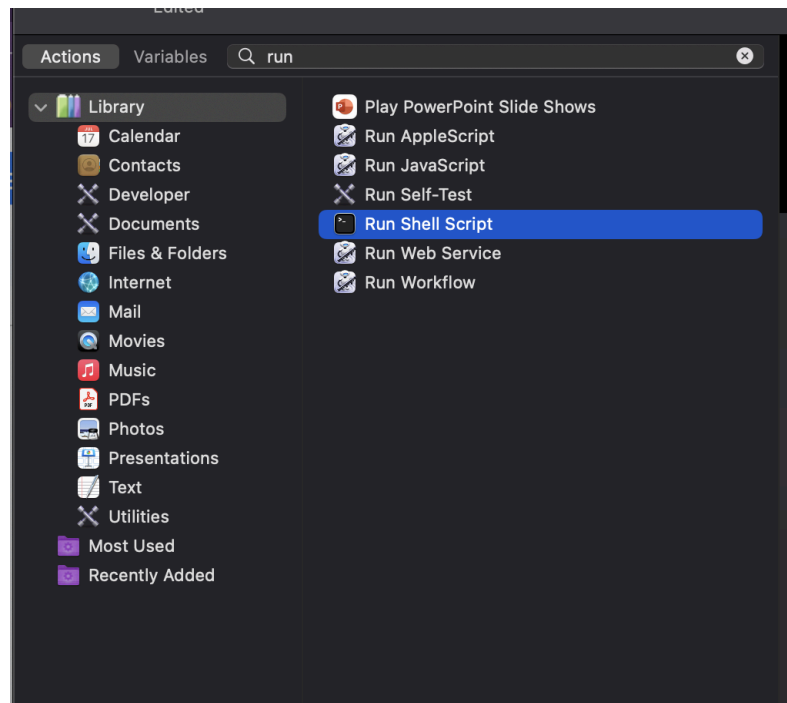

1. Open up Automator
 - a. If you're not sure how to get to automator, search it via spotlight search.
2. Choose new document & select Quick Actions.
3. On the left side...
 - a. Workflow receives current [files & folders]

- b. In [finder]
 - i. Change from any application

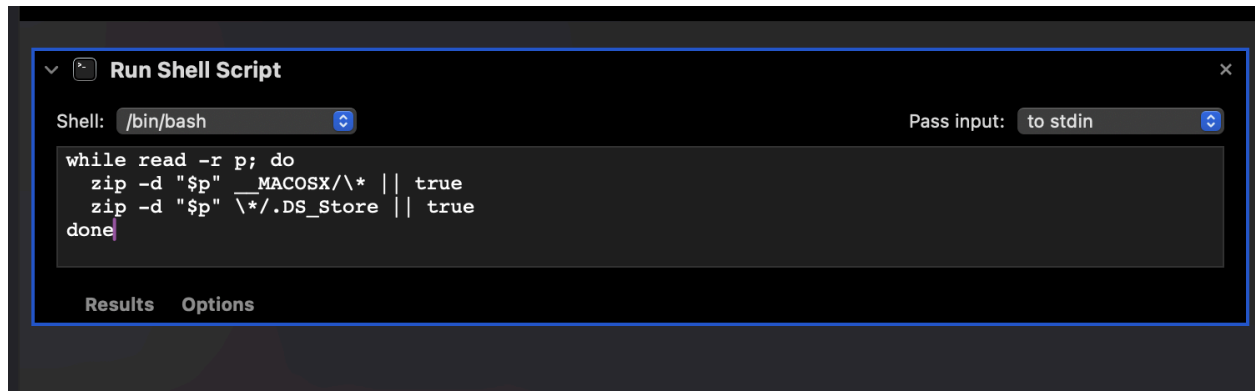

4. Then add the action. You'll want to search for run shell script & drag it from the left to the right.

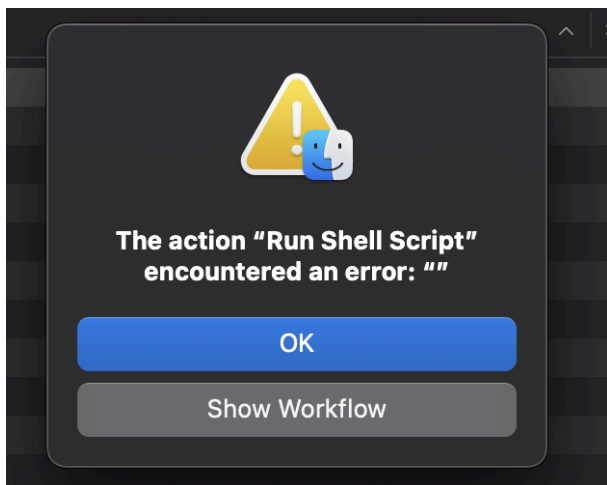

5. In the text box, put this:

```
while read -r p; do  
  zip -d "$p" __MACOSX/* || true  
  zip -d "$p" \*/.DS_Store || true  
done
```

6. Save the document & name it whatever you want/will remember. I chose clean zip.
7. Now after a .zip is created, two finger/right click on the .zip file & scroll down to quick actions & choose your script.
 - a. If your .zip file doesn't have any macosx or ds_store files to delete, you'll get a message like this. Which is fine, yay for you, nothing to delete :)

8. That's it, you're all good!
